LinkedIn: <https://www.linkedin.com/in/kenguvaashwini/>

GitHub: <https://github.com/Ashwini405>

CAREER OBJECTIVE:

Electronics and Communication Engineering graduate with a strong foundation in software development, data structures, object-oriented programming, and web technologies. Proficient in Python and database management (MySQL). Familiar with front-end technologies like HTML, CSS and tools like Power Bi, Git and GitHub. Seeking an entry-level software developer role to contribute to full-stack development projects, learn industry best practices, and grow in a collaborative, Agile driven environment.

EDUCATION:

Bachelor of Technology in Electronics and Communication Engineering	CGPA: 8.01/10
Malla Reddy Institute of Technology and Science	2025

Diploma in Electronics and Communication Engineering	CGPA: 9.2/10
Saradha Institute of Science Technology and Management	2021

SSC (10th Class) – Board of Secondary Education, A. P	CGPA: 9.8/10
Z.P.H.S Hiramandalam, Srikakulam	2018

SKILLS:

- | | |
|----------------------------------|-----------------------|
| • Programming Languages: | Python |
| • Back-End Frameworks: | Django |
| • Databases: | MySQL |
| • Frontend Technologies: | HTML, CSS, JavaScript |
| • Frontend Libraries: | React |
| • Tools and Technologies: | Git, GitHub, VS Code |

PROJECTS:

E-Commerce Website –

Tools & Tech: HTML, CSS, JavaScript, React

- Built a responsive e-commerce website interface using HTML, CSS, and JavaScript.
- Designed product listing pages with dynamic product cards and detail views.
- Implemented Add to Cart and basic checkout UI functionality.
- Created user-friendly navigation with category filtering and search options.
- Ensured responsive design for mobile, tablet, and desktop devices.
- Improved user experience through clean layout and interactive elements.

Project Title: Advanced Encryption Standard (AES) Algorithm on FPGA-

Tools/Tech: Python, Verilog

- Developed a Python-based application to securely encrypt and decrypt text files using the AES encryption algorithm.
- Implemented AES-128 encryption, ensuring confidentiality of sensitive data during file transmission.
- Created a user-friendly interface to input plain text, generate keys, and view encrypted/decrypted results.
- Validated encryption with various test inputs and achieved 80% decryption accuracy on matching keys.
- Demonstrated how AES can prevent unauthorized data access in real-world communication systems.

ACHIEVEMENTS:

- Competed at the state level chess tournament.
- Active member in ISTE student chapter.
- Organized and hosted inter-college tech talk event.

CERTIFICATIONS:

- **Winner – Webzen Hackathon 2025**
Awarded 1st place for developing a full-stack Travel Itinerary Generator that dynamically creates personalized travel plans using real-time data and smart recommendations.
